NORTHERN LIGHTS

AURORA BOREALIS is a permanent and kinetic architectural illumination on the 600m long by 30m tall façade of the Bunge's grain silos, located in Quebec City's old port. Inspired by the northern lights phenomenon, the installation is a collaboration between Robert Lepage (Ex Machina) and Martin Gagnon (Ambiances Lighting & Visual Design). The complete installation consists of 574 colour changing Illuminarc 48 IP LED spots in addition to 1000 variable white LED pixels used to create a starry night effect over the entire south facade of the building. The lighting installation will be a single theme daily, from dawn to 11:30pm until 2013.

The city of Quebec is the main sponsor of the project. The project received financial aid from the Commission de la Capitale Nationale du Quebec.
